Introduction:

1 of 1 review helpful Nice overview with an angle By Baltbuc This is the best one that I rsquo ve read so far And I rsquo ve read several within this series including Nothing Reality and Magnetism Ms Blackmore does an excellent job of laying out the sticky problems but it rarely feels like she rsquo s rushing through it Now this one is a bit different because it is both an overview and an angle with a conclusion The last great mystery for science consciousness has become a controversial topic Consciousness A Very Short Introduction challenges readers to reconsider key concepts such as personality free will and the soul How can a physical brain create our experience of the world What creates our identity Do we really have free will Could consciousness itself be an illusion Exciting new developments in brain science are opening up these debates and the field A very thought provoking book The Guardian About the Author Susan Blackmore is a psychologist freelance writer and lecturer Previously Reader in Psychology at the University of the West of England
